FUNCTION, SAFETY AND AESTHETICS – ROLLER SHUTTERS MADE OF METAL MESH

To date, secure shutter solutions in shopping arcades, underground car parks or kiosks have rarely offered appealing aesthetics. With the typical transparency of metal mesh, the new roll-up door and roller shutter system made of stainless steel mesh from GKD combines aesthetics with maximum functionality. Standing five meters high and up to eight meters wide, the transparent and air-permeable stainless steel design can be used both outdoors and indoors and is virtually maintenance-free. The roll-up doors and roller shutters, produced to European safety standards from high-grade stainless steel, are weather-resistant and easy to look after. The system therefore not only delivers a high degree of functional reliability, but also offers a long service life and low maintenance costs. Despite its elegant design, the mesh is tough and the stable roll-up doors and roller shutters

reliably prevent unauthorized access and theft. At the same time, they guarantee optimum ventilation and an unrestricted view of the areas they protect. Individually matched lighting concepts control the transparency of the mesh and create targeted accents through reflections. GKD can supply a complete solution from a single source, including mesh, motor, guide rails, end profiles and wall switches. As they are perfectly matched to one another and easy to install, the system components ensure that everything is up and running quickly. Depending on the desired degree of light transmission, the roll-up systems are available with GKD mesh types Tigris, Lago or Sambesi.

GKD-SER roll-up doors are produced in cooperation with Braselmann in Ennepetal, Germany.

MESH TYPES

LAGO

SAMBESI

TIGRIS

MESH	LAGO	SAMBESI	TIGRIS
Material	Stainless steel	Stainless steel	Stainless steel
Free area	44,00 %	42,00 %	65,00 %
Total mesh thickness	3,5 mm	7,0 mm	6,2 mm
Weight	6,8 kg/m ²	10,75 kg/m ²	6,4 kg/m ²
Maximum mesh width	8000 mm	8000 mm	8000 mm
Standard width	6000 mm	6000 mm	6000 mm
Solar factor	g_{total} 0,38, Fc 0,56	g_{total} 0,32, Fc 0,55	g_{total} 0,46, Fc 0,78

GKD stainless steel meshes are durable, completely recyclable and easy to clean using standard commercial cleaning agents (please refer to the GKD cleaning instructions for metal mesh).

EXTERNAL MOTOR AND TUBE MOTOR: DIFFERENCES BETWEEN THE SYSTEMS

External motor systems (400 V) are easy to maintain, as the motor can simply be replaced if damaged. An inspection opening should therefore be provided in the area of the motor. Due to their high performance, units with external motors can also be used for large installations. They are suitable for continuous use in highly frequented areas such as entrances and exits to garages up to a maximum size of 8 x 5 m (maximum of ten cycles per hour, depending on the motor type). External systems can be automated.

Tube motor systems (230 V) are more compact than external drives. But since they offer lower performance and heat up more easily, they are only suitable for systems up to a

maximum width of 6 m (depending on mesh type) and are limited to 5-10 movement cycles per day, between which there should be a break of at least 30 minutes. They are controlled solely via a key switch. Tube motor systems are therefore primarily used for shutters that are only moved relatively rarely, such as those at kiosks or sales areas that are only moved twice per day, i.e. once when opening in the morning and once again when closing in the evening. It should be noted that the entire shaft (including hanger) must be removed in the event of damage to the motor. Depending on the installation situation, this can lead to problems and should be taken into account when designing the system.

EXTERNAL MOTOR

Motor: GFA /TYPE SI 10.15 / 17.15 / 25.15 / 40.15 / 55.15 / 75.15

* When using the temperature range +40 °C to +60 °C, the number of maximum cycles per hour should be halved.

PATENTED SAFETY GEAR IN THE TRANSMISSION

- Safeguard to prevent a broken worm shaft or worm gear
- Not dependent on speed or direction of rotation
- Maintenance-free and self-controlled
- Excellent cushioning characteristics in the event of a catching operation

- Supply voltage: 3-400 V, other motors/voltages available on request
- Model with emergency hand crank

STANDARD CONTROL SYSTEM FOR EXTERNAL DRIVES: GFA TS 959

DEAD MAN'S CONTROL SYSTEM FOR GFA ELEKTROMATEN®
WITH DIGITAL DES LIMIT SWITCH OR NES CAM LIMIT SWITCH

Automatic control system for GfA ELEKTROMATEN® with DES digital limit switch or NES cam limit switch

TESTS AND CERTIFICATES FOR TS 971/ Type approval test as per:

DIN EN 12453
DIN EN 12978
DIN EN 60335-2-103
DIN EN ISO 13849-1
TÜV NORD CERT GmbH

TS 959 – DEAD MAN'S CONTROL SYSTEM FOR DES / NES

SPECIFICATIONS

- For all GfA-ELEKTROMATEN units with DES or NES
- Supply voltage:
 - 1 N~230 V, PE / 3~230 V, PE / 3 N~400 V, PE / 3~400 V, PE
- Operating frequency: 50 / 60 Hz
- Permitted temperature range: -10°C to +50°C

HOUSING

- Dimensions W x H x D [mm]: 155 x 386 x 90
- IP65 with direct connection or IP54 with CEE connector
- Protection against contact thanks to cover over live parts
- Plug-in connection cable to the ELEKTROMATEN, can be plugged in from below or above

MODEL

- Integrated OPEN-STOP-CLOSE controller
- Safety reversing contactor (with 2nd independent shutdown method)

- Settings via rotary selector with digital display
- Plug-in connection technology – connection cable to the ELEKTROMATEN in various lengths
- Independently programmable relay contact, e.g. can be used for green traffic light or ramp release
- Plug-in slack rope and passdoor connection

ACCESSORIES

- Main switch
- Emergency stop button
- Key switch

FUNCTIONS

- Automatic detection of DES or NES
- Change in direction of rotation via keyboard
- Stop position settings (on DES) and settings for all functions from the operating level
- Operating mode selectable:
 - Dead man's switch CLOSE / OPEN
 - Dead man's switch CLOSE / lock OPEN

- Extended dead man's switch CLOSE / lock OPEN
With this function, the operator must press the CLOSE button until the door is completely closed. If the CLOSE button is released before this time, the door will automatically travel to the UP stop position.
- Status and info display (including display of the last 6 errors), with advanced evaluation via Service Kit available as an option (adapter+software)
- Cycle counter (cannot be reset)
- Maintenance cycle counter:
 - Can be adjusted from 1,000 to 99,000 cycles
 - Once the maintenance cycle number is reached, choice between display or switchover to dead man's operation
- Jam monitoring (with DES), the control system detects a door jam and shuts down the drive
- Dynamic runtime monitoring (with NES):
 - Each time a door moves, the runtime between the stop positions is measured and compared against the last reference time
 - If the runtime is exceeded (deviation can be preset), the control system shuts down the drive
- Adjustable force monitoring in OPEN direction (with DES):
 - Self-learning, so no triggering of force monitoring for example when changing the spring tension
